

# Learn & Work Securely from Anywhere

## Breach Defense

### with DSI Tech Managed Security Services

**Protect your users and network from hackers, malware, ransomware, and other dangerous security breaches.**

Security breaches continue to cause business disruption and chaos in the world today. Attacks can take your entire organization hostage, locking up critical resources and causing extended operational issues that impact your users.

DSI Tech's cloud-based Breach Defense solutions begin working together within seconds of deployment – immediately sharing threat intelligence through the cloud to react quickly. By combining two or more technologies, Cisco security solutions block threats faster and keep your network safe.

### ▶▶▶ DSI Tech's Managed Breach Defense includes:

#### Cisco Umbrella

Cloud-delivered security platform that secures internet access and controls cloud application usage across networks, branch offices, and roaming users.

#### Cisco AMP for Endpoints

Cloud-delivered endpoint protection and advanced Endpoint Detection and Response (EDR). Stops breaches by blocking threats plus rapidly detecting, containing, and remediating advanced attacks that attempt to compromise your devices.

#### Cisco Duo Security

Delivers simple, secure access to all applications, on-premises or in the cloud. For any user, on any device, from anywhere. Defends against data breaches by making it easy to effectively implement and enforce security policies & processes, including the use of Two-Factor Authentication.

#### Cisco Threat Response

Automates integrations across Cisco Security products and accelerates key security operations functions, including detection, investigation, and remediation. Cisco Threat Response gives you the contextual awareness you need so you can see, investigate, and act on threats fast.

# Learn & Work Securely from Anywhere

## Benefits of DSI Tech's Managed Breach Defense

- ✓ Maximize blocking to eliminate threats and reduce the number of downstream alerts your team needs to investigate.
- ✓ Automate inter-product and inter-vendor communication and sharing of threat intelligence - freeing your team to do higher level analysis.
- ✓ Accelerate threat hunting, enterprise-wide investigation, and incident response.
- ✓ Reduce complex analysis that often takes hours or even days.
- ✓ Provide the information your team needs at their fingertips and empower them to take action anywhere in seconds.
