Capability

AUDIOVISUAL INTEGRATION

DSI Tech can take a design, system change, or upgrade to project completion. We have certified designers and installers that follow industry standards for specifications, schematics, codes, and safety protocols. Our capabilities include control programming, digital signal processor configuration, cabling, and networking infrastructure. Our facility contains a warehouse for inventory staging and labs for system builds.

MAINTENANCE SERVICES

DSI Tech provides a comprehensive system verification to protect your investment and keep your room utilization optimal. We create a custom checklist for each audiovisual system and follow manufacturer specifications and industry standards. We can establish communication for any task! We also offer training, support, and 24x7x365 remote monitoring capability.

CONSULTING SERVICES

DSI Tech creates designs to meet your communication goals. We develop drawings, gap analyses, feasibility studies, infrastructure planning, and budget estimates. We specialize in broadcasting, room automation, web conferencing, video conferencing, sound reinforcement, and video displays. We're capable of coordinating network requirements, construction, and electrical assessments.

OPERATIONS SERVICES

DSI Tech provides facility support, live event support, meeting planning, audiovisual setup, and breakdown. We specialize in supporting lectures, advisory committee meetings, distant learning applications, and workshop events. We take pride in asking the right preliminary questions, anticipating your needs, and being equipped to provide a quality event.

Customer Service

DSI Tech puts the customer first and understands the importance of providing a valuable experience from start to finish. We aim to provide the highest level of customer service with quick response times, various support options, cost-effective solutions & services, and quality partnerships with vendors. We provide a one-year limited warranty on all products that we furnish. The warranty service also includes setup to establish communication to the helpdesk, escalation and notification process, escalation lists, alert definitions, and SLAs.
