# Ransomware Attacks

Since July 2, 2021, the Cybersecurity & Infrastructure Security Agency (CISA) along with the FBI have been responding to a global cybersecurity incident in which cyber threat actors executed ransomware attacks - leveraging a vulnerability in the software of Kaseya VSA on-premises products - against Managed Service Providers (MSPs) and their downstream customers.

In addition to the CISA announcement, you can read more about this attack and affected MSPs from Cisco Security or the Cisco Talos Threat Advisory page.

Check out this video for attack facts and what it all means for defense plans moving forward:

How to Avoid Ransomware

Ransomware attacks happen constantly and to all types of agencies, businesses, governments, organizations, and school systems. These nine security practices provide guidance for preventing an expensive and harmful ransomware attack from happening to you.

Not sure what to do next? Simply reach out to DSI and we'll help get you started!

Download the handout to learn more about each of these actions:

1. Email Filtering & Anti-Phishing Training
2. Vulnerability & Patch Management
3. Multi-Factor Authentication (MFA)
4. Password Management
5. Disable RDP Access
6. Privileged Access Management
7. Segregated & Tested Backups
8. Monitoring & Response
9. Incident Response Plan
