Realtek Flaw Affects Network Devices

Exploit code has been released for a critical vulnerability affecting networking devices with Realtek's RTL819x system on a chip (SoC), which are estimated to be in the millions. The flaw is identified as CVE-2022-27255 and a remote attacker could exploit it to compromise vulnerable devices from various original equipment manufacturers (OEMs), ranging from routers and access points to signal repeaters. [Details from NIST]

EdgeConnect Attains SD-WAN Cert

After rigorous evaluation, the Aruba EdgeConnect Enterprise SD-WAN platform has received ICSA Labs Secure SD-WAN Certification, representing the market's first complete SD-WAN solution to receive the distinction. ICSA Labs provides third-party testing and certification of security and health IT

products, as well as network-connected devices, to measure product compliance, reliability, and performance for most of the world's top technology vendors.
