HPE Launches ProLiant Gen11 Servers

Hewlett Packard Enterprise (HPE) has introduced the [11th generation of its ProLiant servers](#) designed for a range of modern workloads including AI, analytics, cloud-native applications, graphic-intensive applications, machine learning, Virtual Desktop Infrastructure (VDI), and virtualization. Compared to the previous server generation, the new Gen11 servers support twice as much I/O bandwidth and 33% more high-performance GPU density per server to support AI and graphic-intensive workloads than the prior generation.

Wi-Fi 6E Momentum

Wi-Fi 6E is delivering value to users, enterprises, and service providers, and the 6 GHz band is satisfying growing demand for higher-bandwidth services and more immersive experiences. Since its introduction, Wi-Fi 6E has gained traction as the de-facto industry standard in products, and with healthcare, education, and sports and entertainment environments. There is immense market opportunity for Wi-Fi 6E, and decisions by regulators and policymakers around the world to open the entire 1200 MHz of spectrum in 6 GHz for Wi-Fi will have a significant impact on user experiences for students, employees, healthcare workers, researchers, and entrepreneurs in those countries. Enterprises deploying Wi-Fi 6E will also see a competitive advantage.

Cisco Secure Crushed AV Test

Cisco Secure Endpoint's effectiveness is off the charts in protecting your enterprise environment. The facts are rooted in actual test results from the annual [AV-Comparative EPR Test Report](#) published in October 2022. Not only did Secure Endpoint knock it out of the park in enterprise protection, but Cisco Secure Endpoint obtained the lowest total cost of ownership (TCO) per agent at \$587 over 5 years. No one else was remotely close in this area.

Cloud Security & Zero Trust Take Center Stage

The [Cisco Partner Summit](#) in early November started with the large networking and security giant emphasizing the progress it has made on the Cisco Security Cloud, zero trust, and overall network security. Cisco's cloud platform aims to unify management and policy administration across an organization's entire environment via a single interface. The platform features open APIs that support integration and has been designed to protect an IT environment end-to-end. On the zero-trust front, Cisco announced that Duo Passwordless Authentication was now available for all customers to protect single sign-on (SSO) applications. Users can login without any password by leveraging biometrics (Windows Hello and Mac touch ID) and security keys. Cisco has also added the Duo Mobile app as a new option for passwordless authentication. Additional event highlights can be found [here](#).
