DSI Tech Earns New Cisco Specialization for Environmental Sustainability

10/06/22 Ashburn, VA: DSI Tech is proud to achieve the Cisco Environmental Sustainability Specialization, a new opportunity to make a greater difference toward caring for the planet. With this specialization, partners like DSI Tech contribute to a circular economy that is expected to unlock $4.5 trillion of economic value by 2030. Rather than using and disposing of products in a linear economy, products in a circular economy become valuable assets that can be used again and again, designing out waste and pollution while regenerating natural systems.

"DSI Tech is committed to joining Cisco in driving positive environmental changes through innovative technology," said Alan Bechara, Executive Vice President. "We look forward to offering eco-friendly solutions, encouraging the reuse and recycling of products, and helping our customers meet their sustainability goals."

Sustainability refers to the protection (rather than depletion) of natural resources such as coal, natural gas, and water to maintain an ongoing balance between lifestyles and the environment. Environmental sustainability is a critical concern in the 21st century, with people relying on electricity and water daily in their homes and businesses. Cisco pledges 100% product return and ambitious Net Zero GHG emissions goals, in addition to building sustainability practices for partners and their customers. Through programs like "take back and reuse," Cisco makes sure anything that comes from a customer's network can be shipped back to Cisco, to be responsibility reused, recycled, or repurposed.
