

▶▶▶ Partner Overview

The Challenge: The world you know is changing. The cloud is your new data center, the internet is your new network, and Software-as-a-Service (SaaS) is your new application stack. While these solutions deliver the flexibility and agility the modern enterprise craves, the resulting ecosystem of external dependencies and third-party services creates significant operational blind spots for IT.

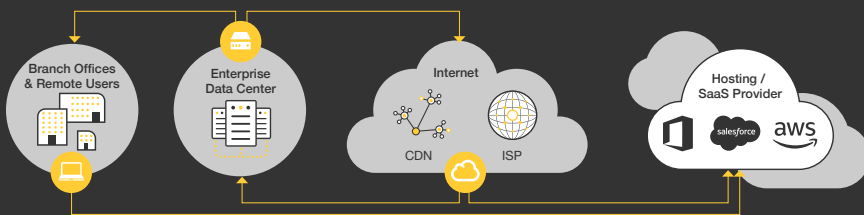

The Solution: You need monitoring and visibility that go beyond narrowly focused network and application performance management capabilities. **ThousandEyes** delivers real-time, continuous monitoring to enhance your understanding of how people interact with critical applications and services across various networks. See beyond the edge to manage networks outside direct control.

How ThousandEyes Works IN THREE EASY STEPS

1. ThousandEyes collects billions of performance measurements from pre-deployed global vantage points in the cloud, internet, WAN, and devices.
2. They correlate this data from every user to every application to every network dependency to accelerate insights useful for IT operations.
3. Teams can use ThousandEyes actionable intelligence to produce faster issue resolution.

Visibility from Everywhere that Matters

Key Benefits

- ✓ Revenue assurance from faster resolution of incidents and outages impacting operations
- ✓ Reduce customer churn and increase satisfaction through improved digital experiences
- ✓ Engage employees and make them more effective with better application experiences
- ✓ Hold service providers accountable to their SLAs to eliminate disruptions to operations
